Description:

Vondom's Bum Bum was born from the principle of not designing objects, but rather musical instruments to be used for another purpose; the same as a person who holds a shell to their ear to hear the ocean. This collection that has tubular shapes allows us to experiment with light and sound simultaneously. Its "argonautic" form enables us to create a new environment, as well as atmospheric spaces, wherever we are. RGB lighting can also be incorporated, a highly weatherproof system that can be used to create truly enveloping atmospheres.
