### **Description:**

It consists in coloring iron or stainless steel Aisi 304 and involves several phases: burnishing using a RAL colour (ex: RAL 7034), manual brushing to get the "scratched" effect and application of a transparent varnish. As it can be applied on iron or stainless steel, Mastral can be used for furniture, coverings and accessories. Differences compared to the sample provided are not to be considered as a manufacturing defect, but as a feature of the manual processing, that may be susceptible to variances in colour and homogeneity.
